

Splitter/splice tray for TENIO closures: New Product

Introducing the TENIO Splitter/splice **tray** for holding up to 1 optical device and 9 splice protectors. The Splitter/splice tray provides a unique solution when a number of splitters are required at any possible location in the network.

The Splitter/splice tray can be called: “all in one” as this solution provides the splitter, splice and fiber storage in one very slim 4mm tray compatible with other available TENIO trays.

The TENIO fiber splice **closure** is used in the distribution portion of FTTx/ FTTH networks. Its small size allows it to fit in space-constrained environments including small underground handholes, the side of a building or on a strand between poles.

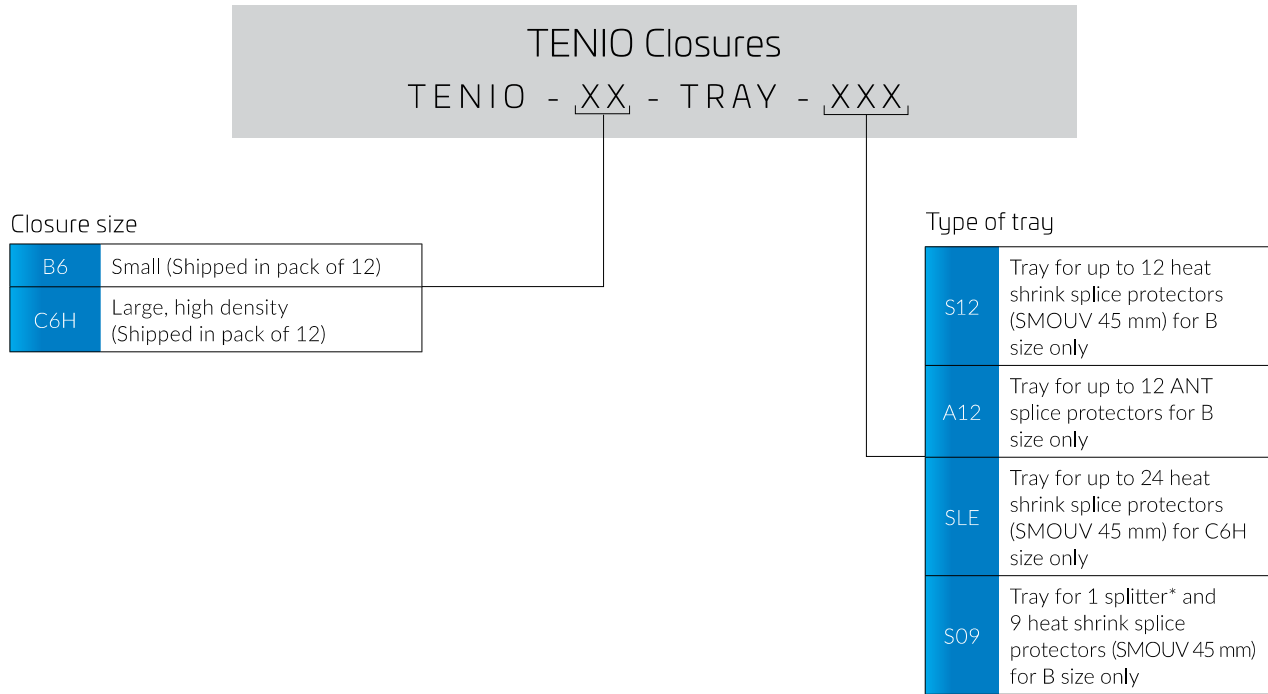

Next to this splitter tray, the TENIO closures also offer today the possibility to install splitter holders in a field installable housing, decentralized, on the bottom plate of the closures in a dedicated area, to maintain full splice capacities on the trays. Depending on the application or needs, customers can choose whichever solution works best for them.

Features and Benefits

- Compatible with TENIO-B6 size closures
- Compatible with standard SPLICE only or PATCH TENIO trays allowing differentiation/tailoring in density & use
- Free space for 1 bare splitter (250µm fibers) – split ratio 1x4 or 1x8 – and 9 heat shrink protectors + fiber routing
- Easy click in of splitter housing

Ordering Information

Part number	Description
CV5891-000	TENIO-B6-TRAY-S09

*Normalized Splitter dimensions of 40x4x4mm (LxWxH)
